KEYNOTE				
20	9:30	FEATURE ADDRESS: ENSURING EFFECTIVE CYBER JUSTICE IN THE CARIBBEAN: Developing the requisite, cogent responses to increasing online criminality, cyber terrorism, and cyber warfare	Daniel Ackerman, International Computer Hacking & Intellectual Property Adviser USDOJ	
		Poignant questions on digital policy are still discussed in silos. As our societies become more dependent on digital services, the cyber risk portfolio also increases exponentially. New types of cyberattacks are continuously emerging, creating acute challenges for countries and their efforts to detect and classify new behaviors’ and malicious actors. Ransomware, and other social engineering techniques, have increased during the pandemic.. An overwhelming majority of cybercrimes contain transnational elements, even when perpetrators and victims are determined to be at one location. The issues surrounding effective cyber justice span detection, investigation, preservation of evidence, and prosecution of crimes. These tasks must occur against the backdrop of robust international cooperation among authorities and concerned actors. This keynote address will highlight specific Caribbean challenges and opportunities for delivering cyber-justice and bringing justice to the victims of cyber criminality.		
15	9:50	Keynote Interaction / Q&A		Facilitator – Einar Bolin
10	10:05	MORNING BREAK
