Global Situation in Internet Use

How many of us are online

THE INTERNET IN 2023 EVERY MINUTE

Created by: eDiscovery Today & LTMG

In just ...

How are you affected?

Cybersecurity is for girls too

A holistic and human-centered approach to cybersecurity

Gender stereotypes affect girls' access to the internet

Myths: “Digital security is difficult!”
“Cyber risks are not *real* risks”

Cybersecurity is for girls too

Cybersecurity also is...Precautions, tools and strategies **we** can adopt to protect our digital integrity from cyber threats such as:

- Phishing and smishing
- Downloading malware
- Scams (i.e. free access to online games)
- Credit card theft
- Oversharing information online
- Smart toys and connected devices
- Swatting
- Webcam spying

Applying gender lens to cybersecurity

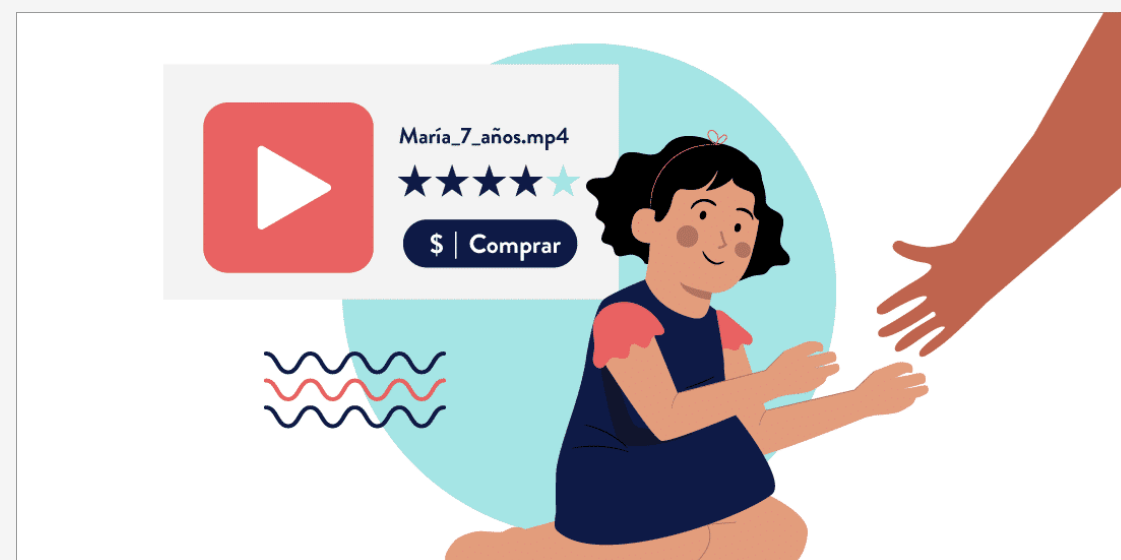

While all people are exposed to cyberattacks, the risks and aggression that girls and women face online **are different** from those faced by boys and men

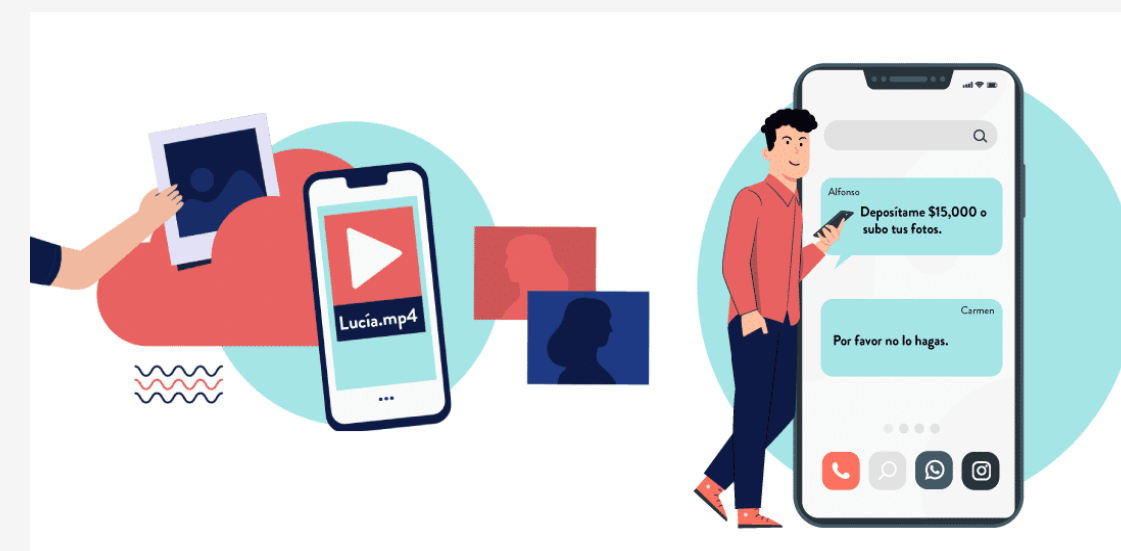

What are the most common cyber attacks faced by girls?

- Cyberbullying
- Online grooming and trafficking through social media and gaming platforms

- Non-consensual distribution of intimate content
- Sextortion

- Cyberharassment
- Online stalking, surveillance and child abduction

- Unauthorized access and use of personal data, identity theft

- Doxxing

First step: Digital risks self-analysis

- ? How much time do you spend online?
- ? What devices do you use throughout the day?
- ? How do you keep in touch with your friends and family?
- ? When was the last time you changed your passwords?
- ? Have you had a look at the privacy and security settings on your social media?
- ? Are you posting private information?

Know who you are, what you do and how you do it

In your school/job

In your personal life

In your environment

Cyber basic: protect your data and digital identity

The internet does not have a "Delete" key.

The most important cybersecurity practice you can adopt is to avoid sharing personal information online to prevent or limit potential attacks.

Where are you sharing the information? How is asking for it? How is your information going to be used? Is it necessary to share it?

Social Engineering

Social Engineering

Obtaining desired confidential information
through manipulation of a person

Success factor of an attack
Make a person trust you

Information available in internet

Info available in

- Devices in use
- Close friends
- Topics of interest
- Geographical location
- And much more...

Example

Tool tinfoleak (tool)

Let's improve our security on Twitter

Verify Authentication and additional protection

More options > Settings > Security and account access

Check the location option for your tweets

More options > Settings > Privacy and Security > Location

How do they find you

More options > Settings > Privacy and Security > Visibility and contacts

Photo Tagging

More options > Settings > Privacy and Security > Photo Tagging

Report

Report the tweet if abusive

OAS | More rights
for more people

Aspects to consider

Think before sharing something

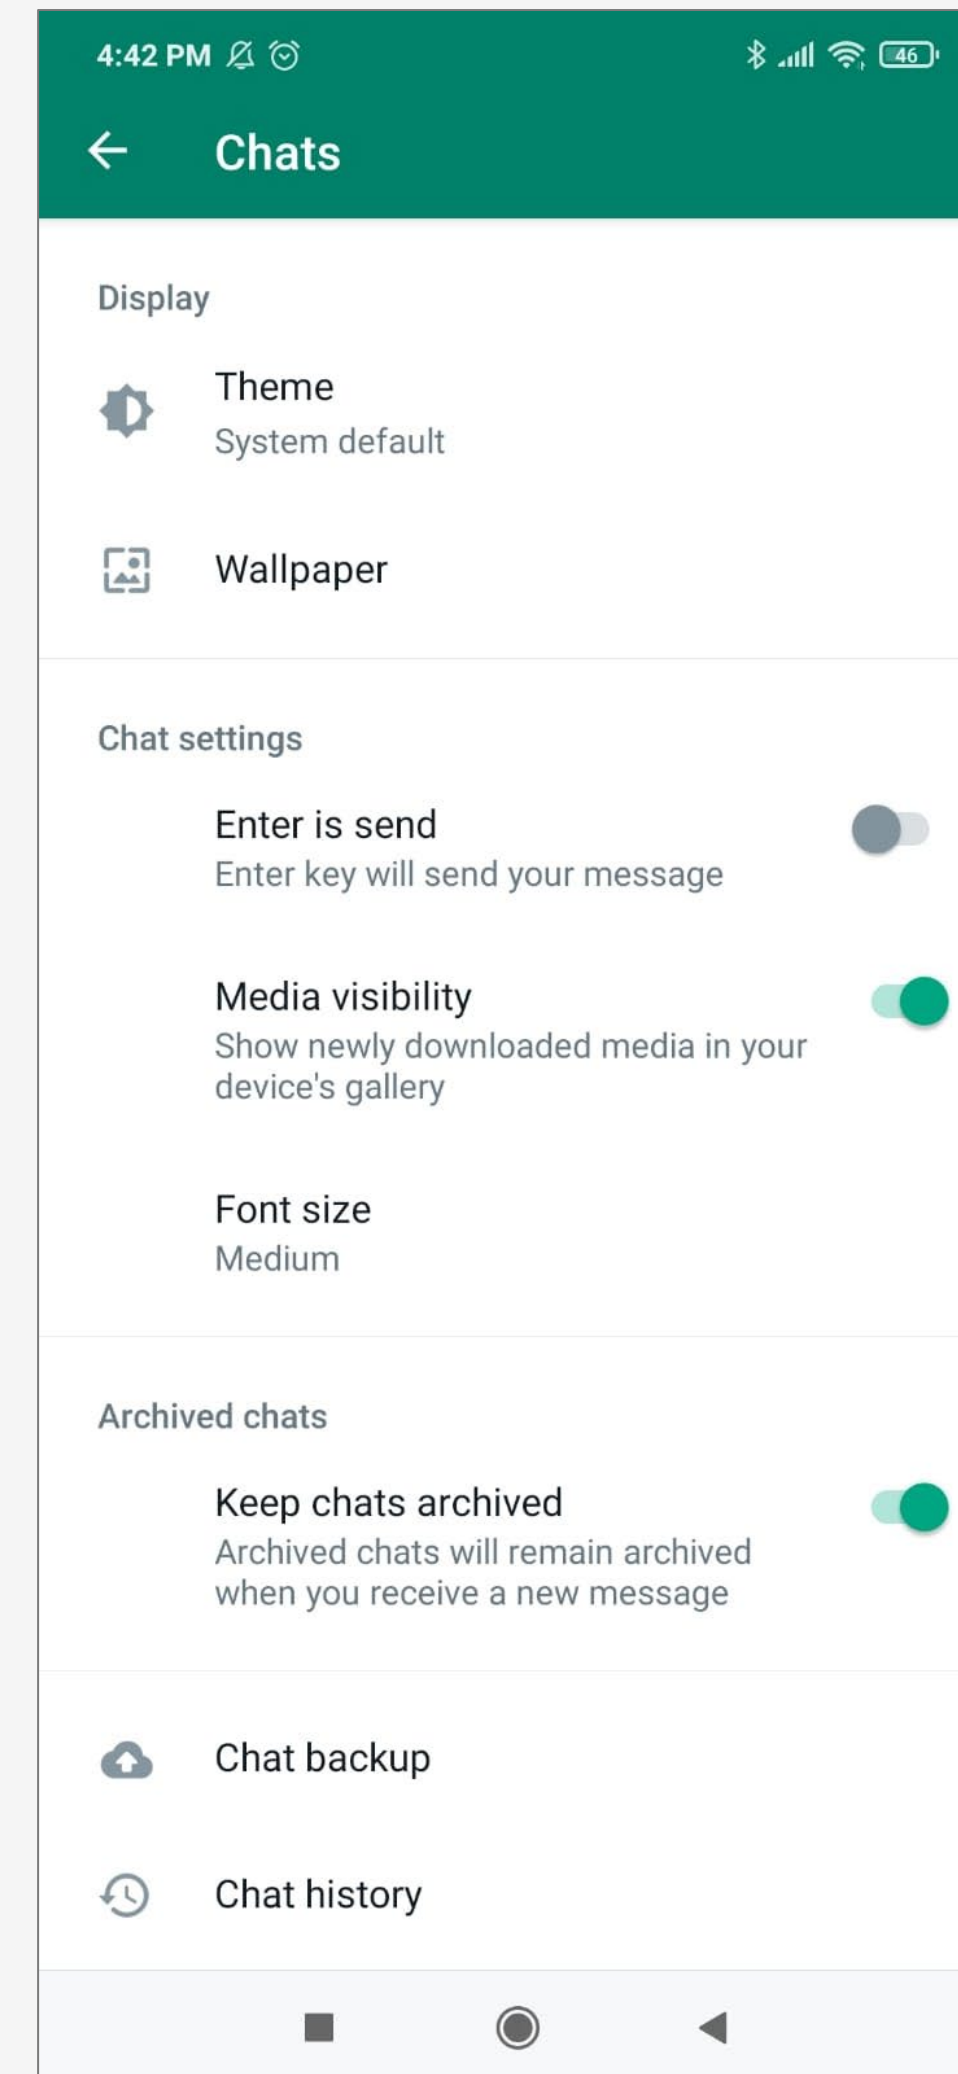

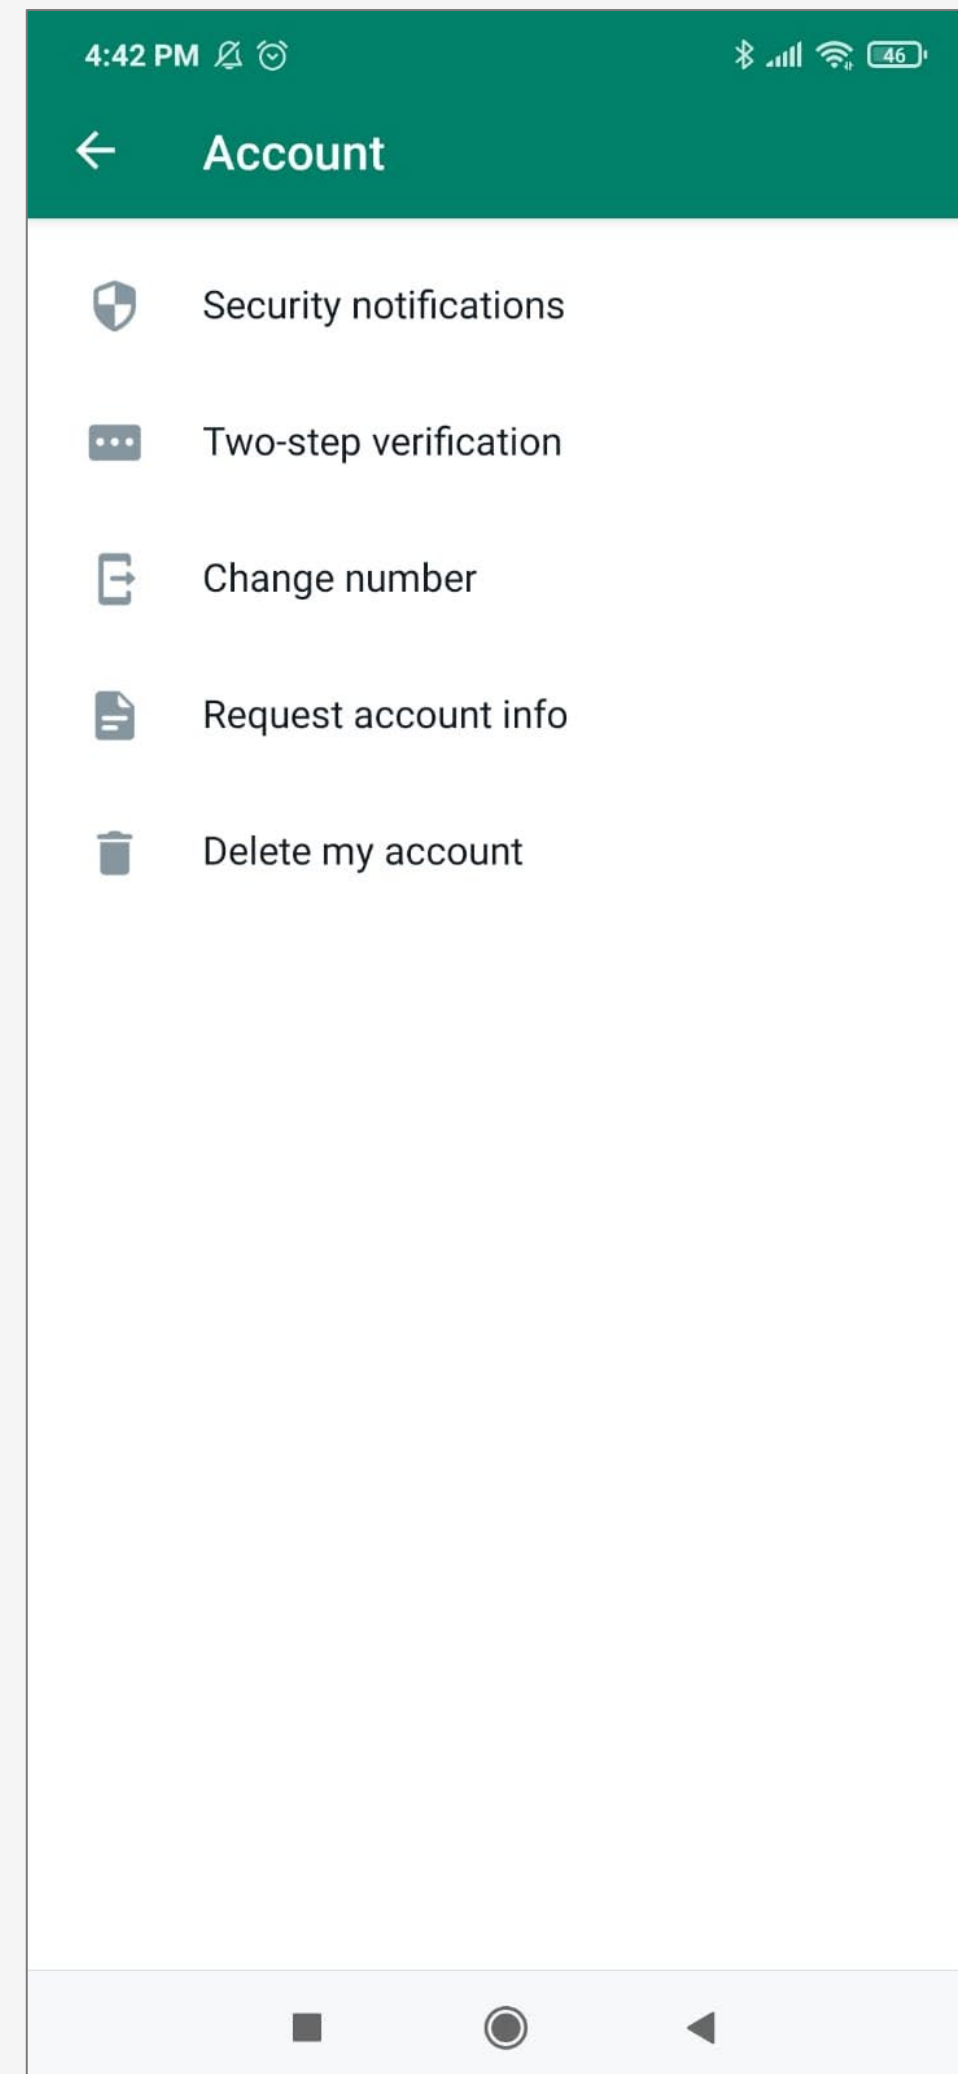

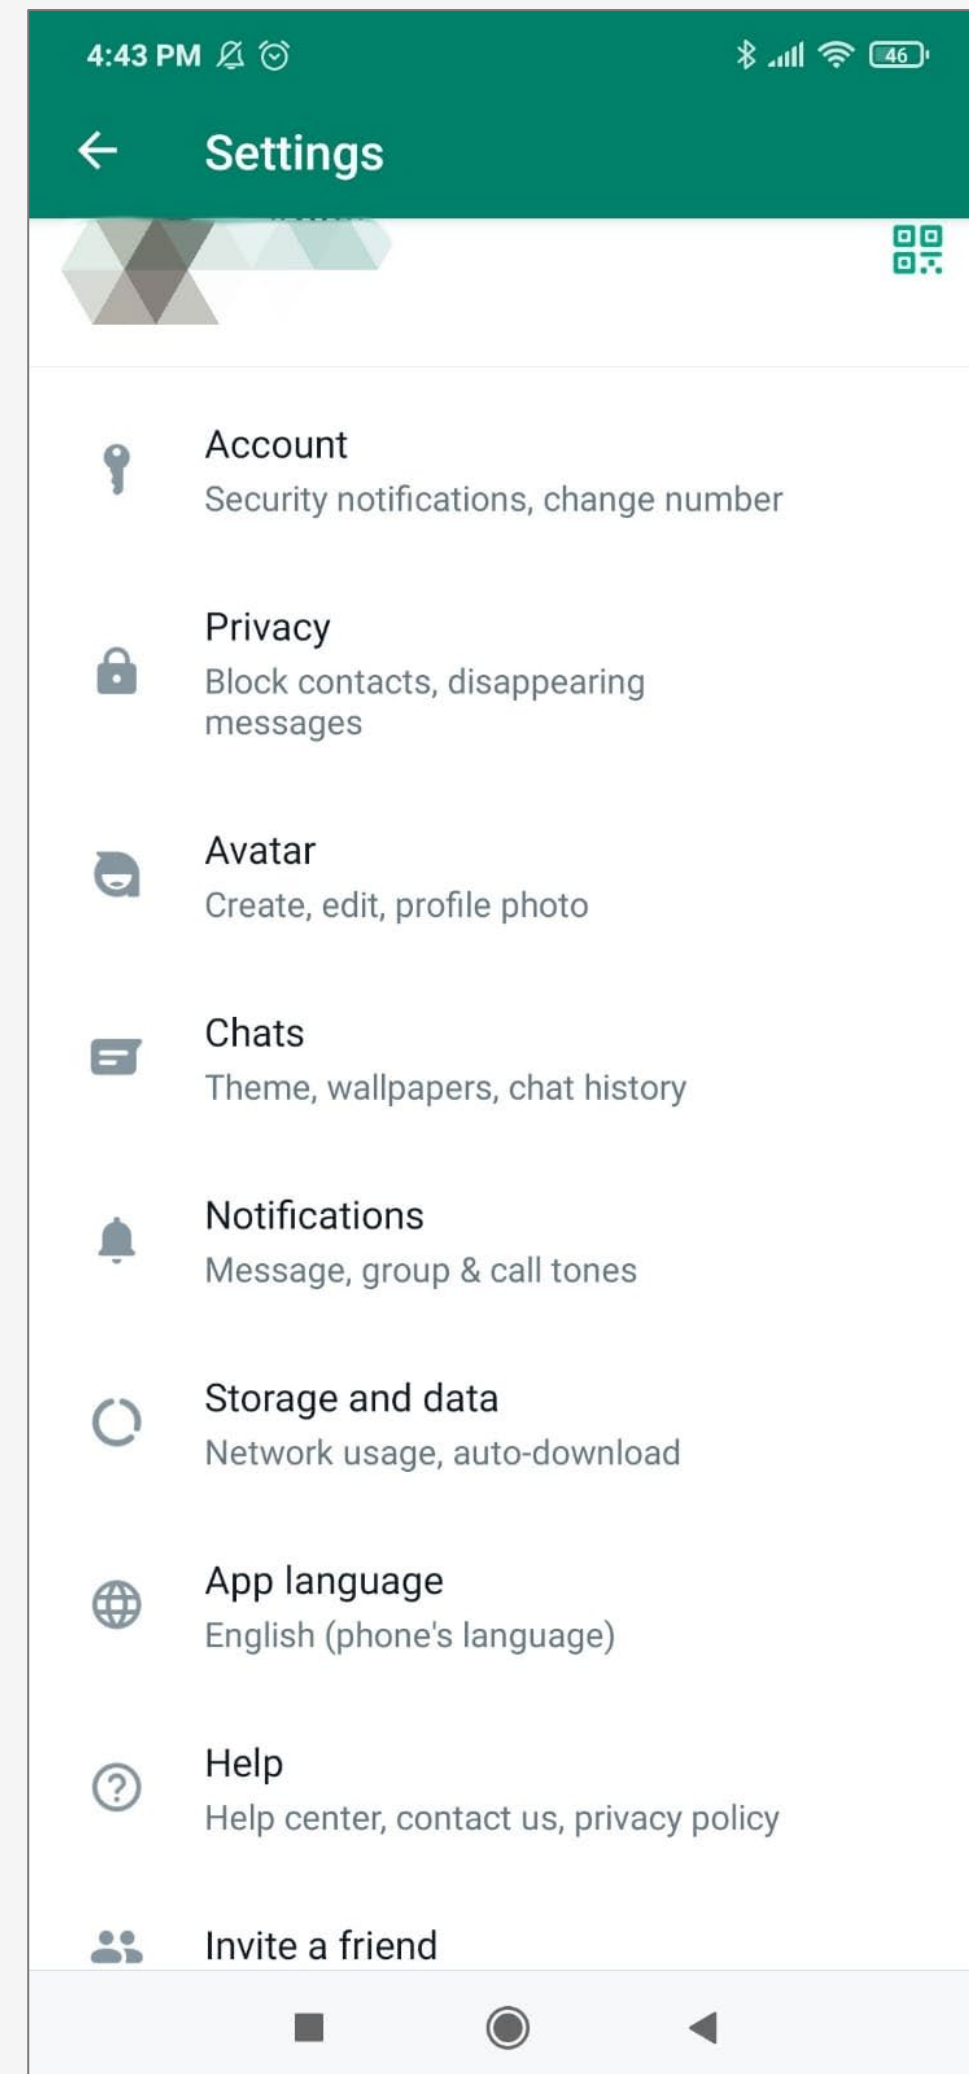

Greater security controls who can see you and disables backups in WhatsApp

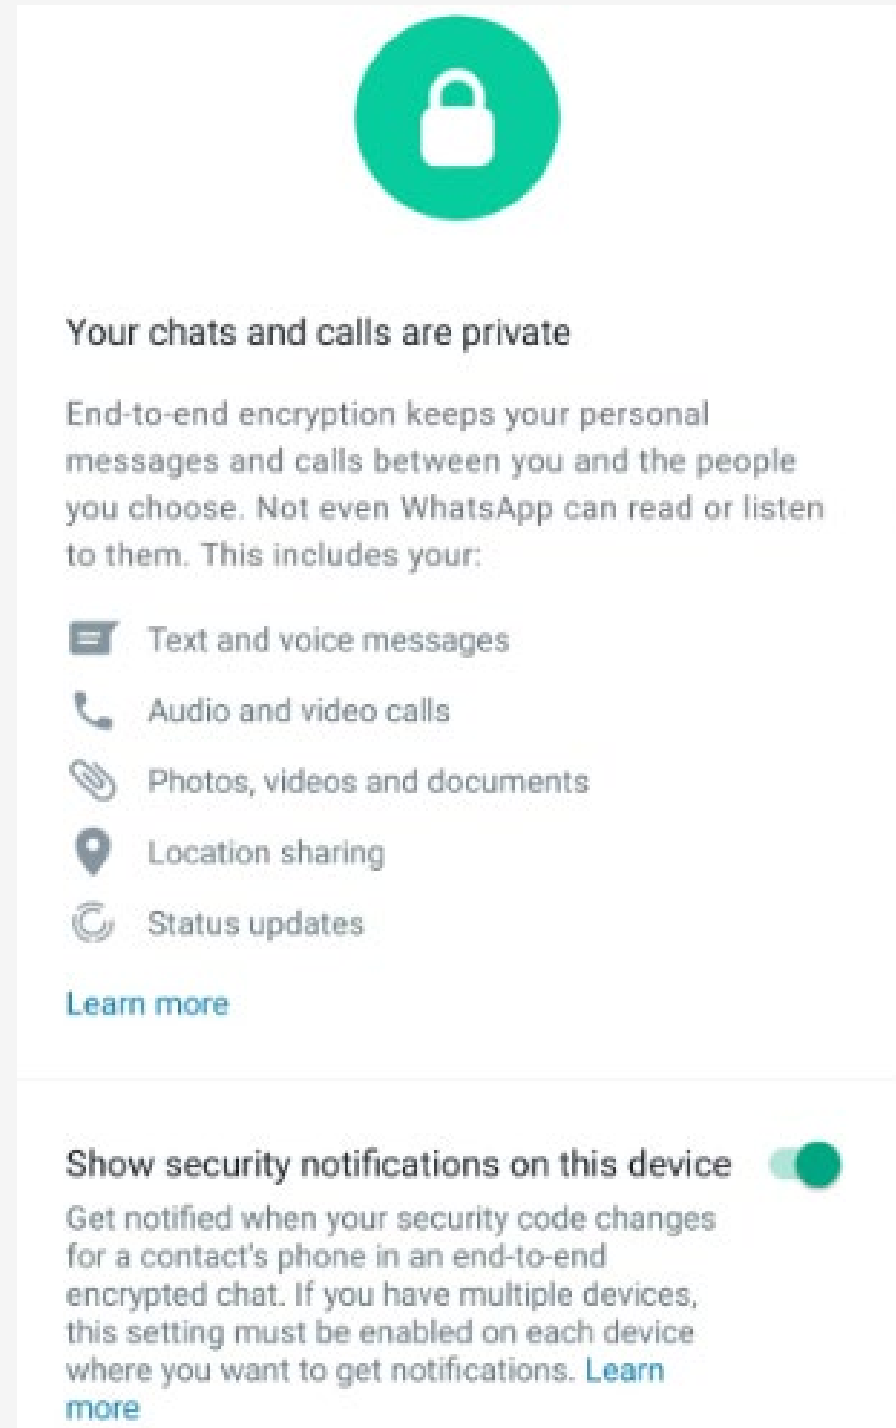

Activate 2FA

WhatsApp Privacy

Security Notification

Your chats and calls are private

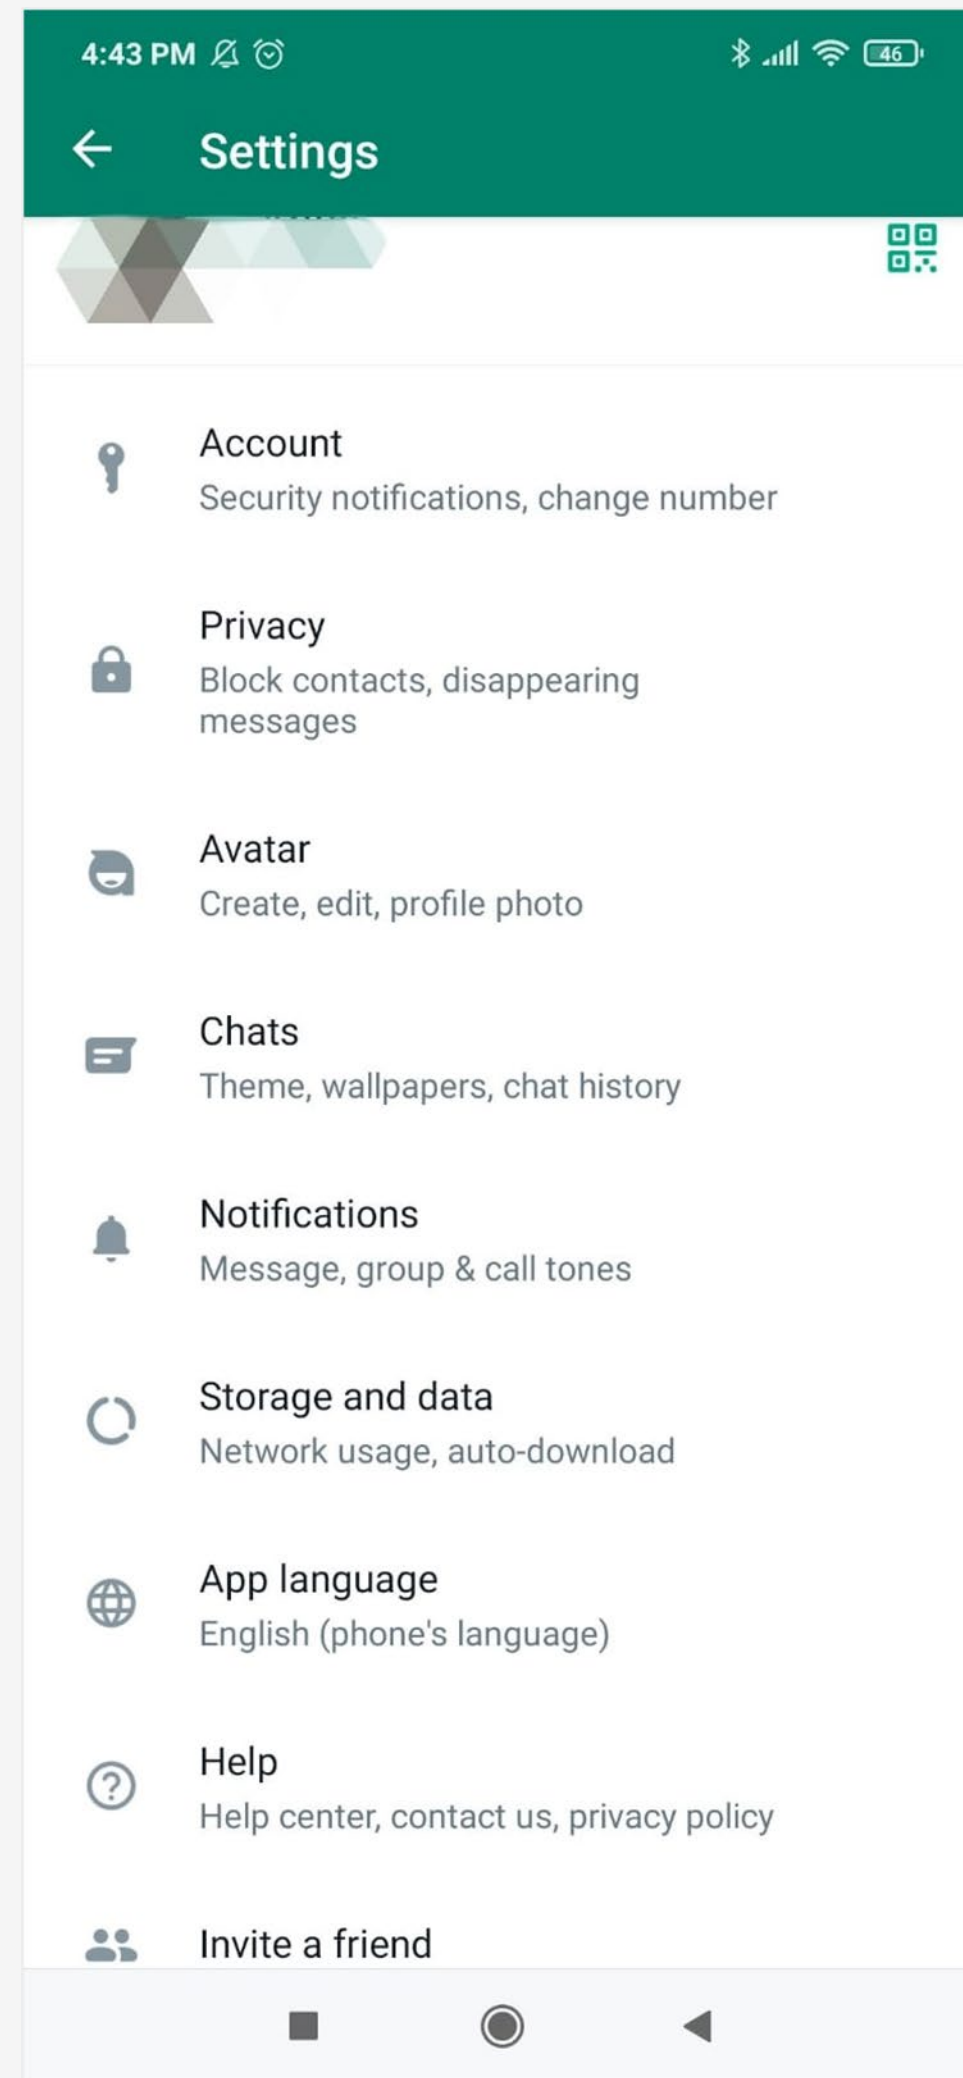

End-to-end encryption keeps your personal messages and calls between you and the people you choose. Not even WhatsApp can read or listen to them. This includes your:

- Text and voice messages
- Audio and video calls
- Photos, videos and documents
- Location sharing
- Status updates

[Learn more](#)

Show security notifications on this device

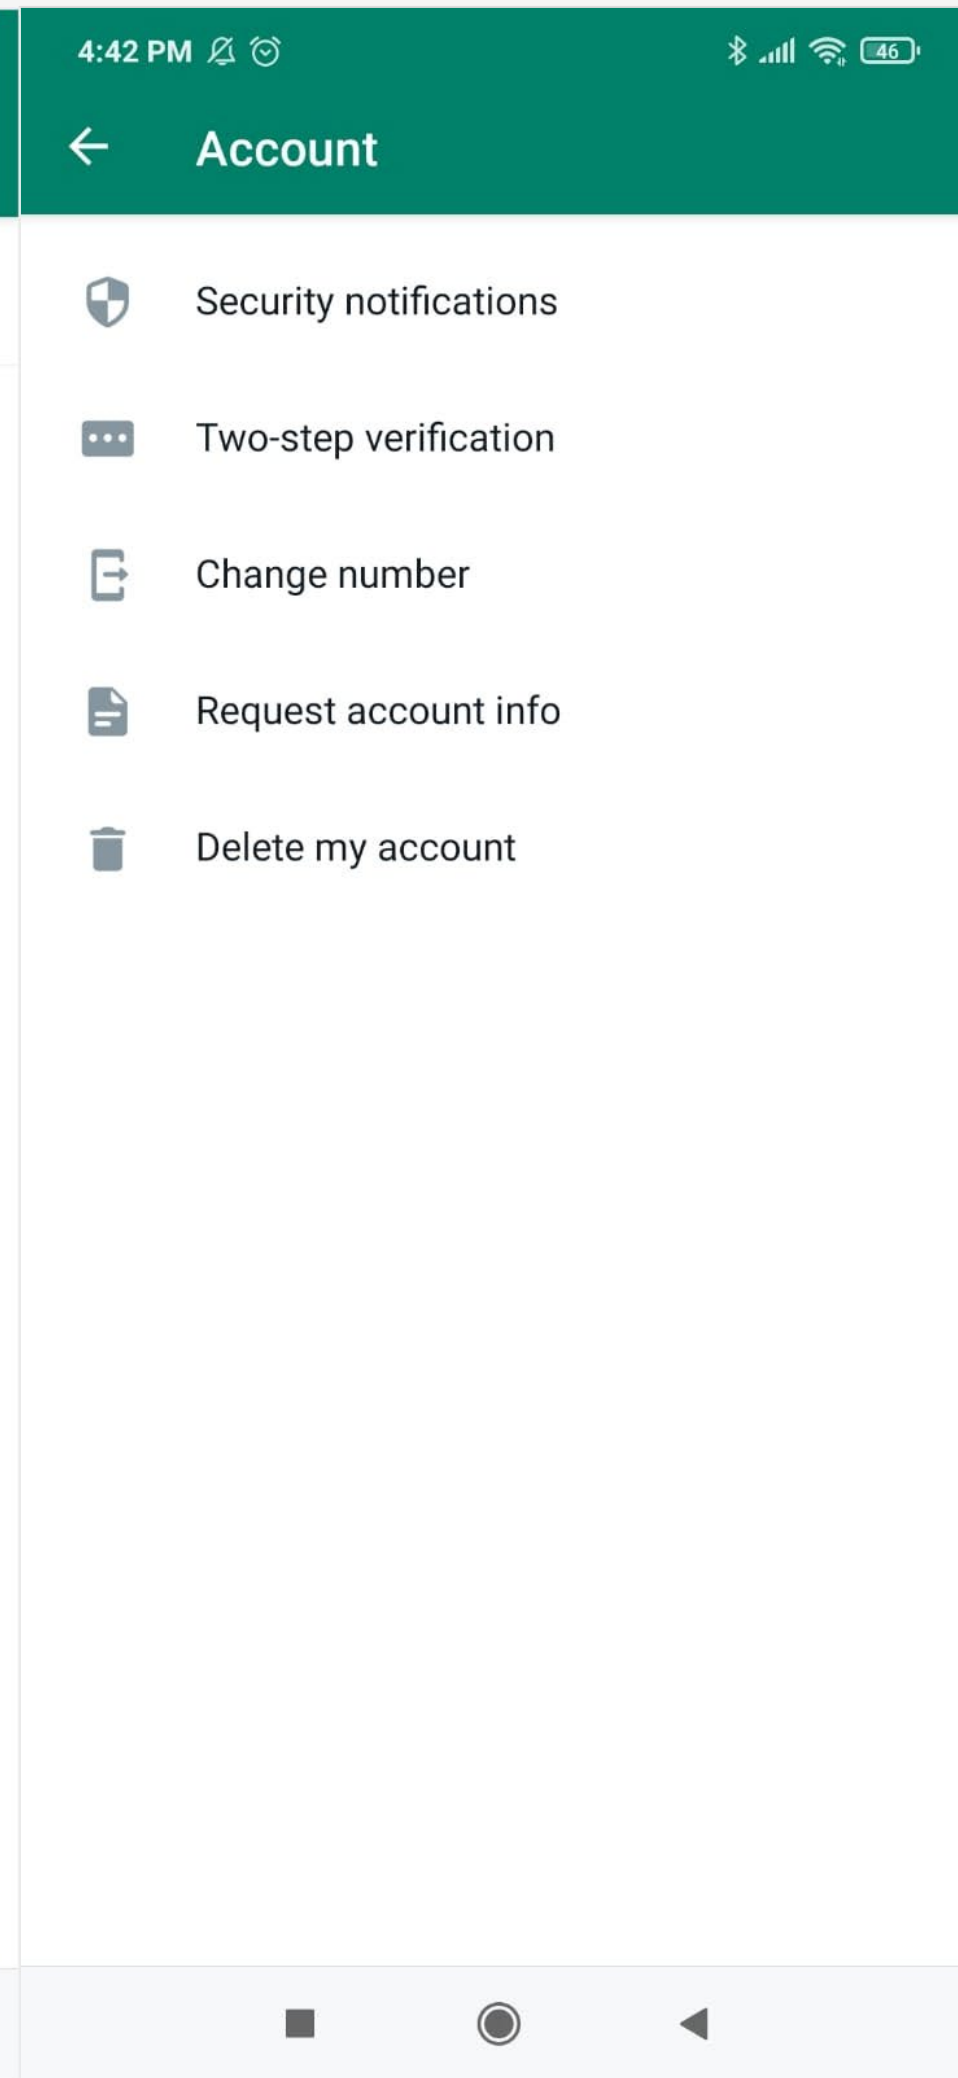

Get notified when your security code changes for a contact's phone in an end-to-end encrypted chat. If you have multiple devices, this setting must be enabled on each device where you want to get notifications. [Learn more](#)

4:43 PM

← Settings

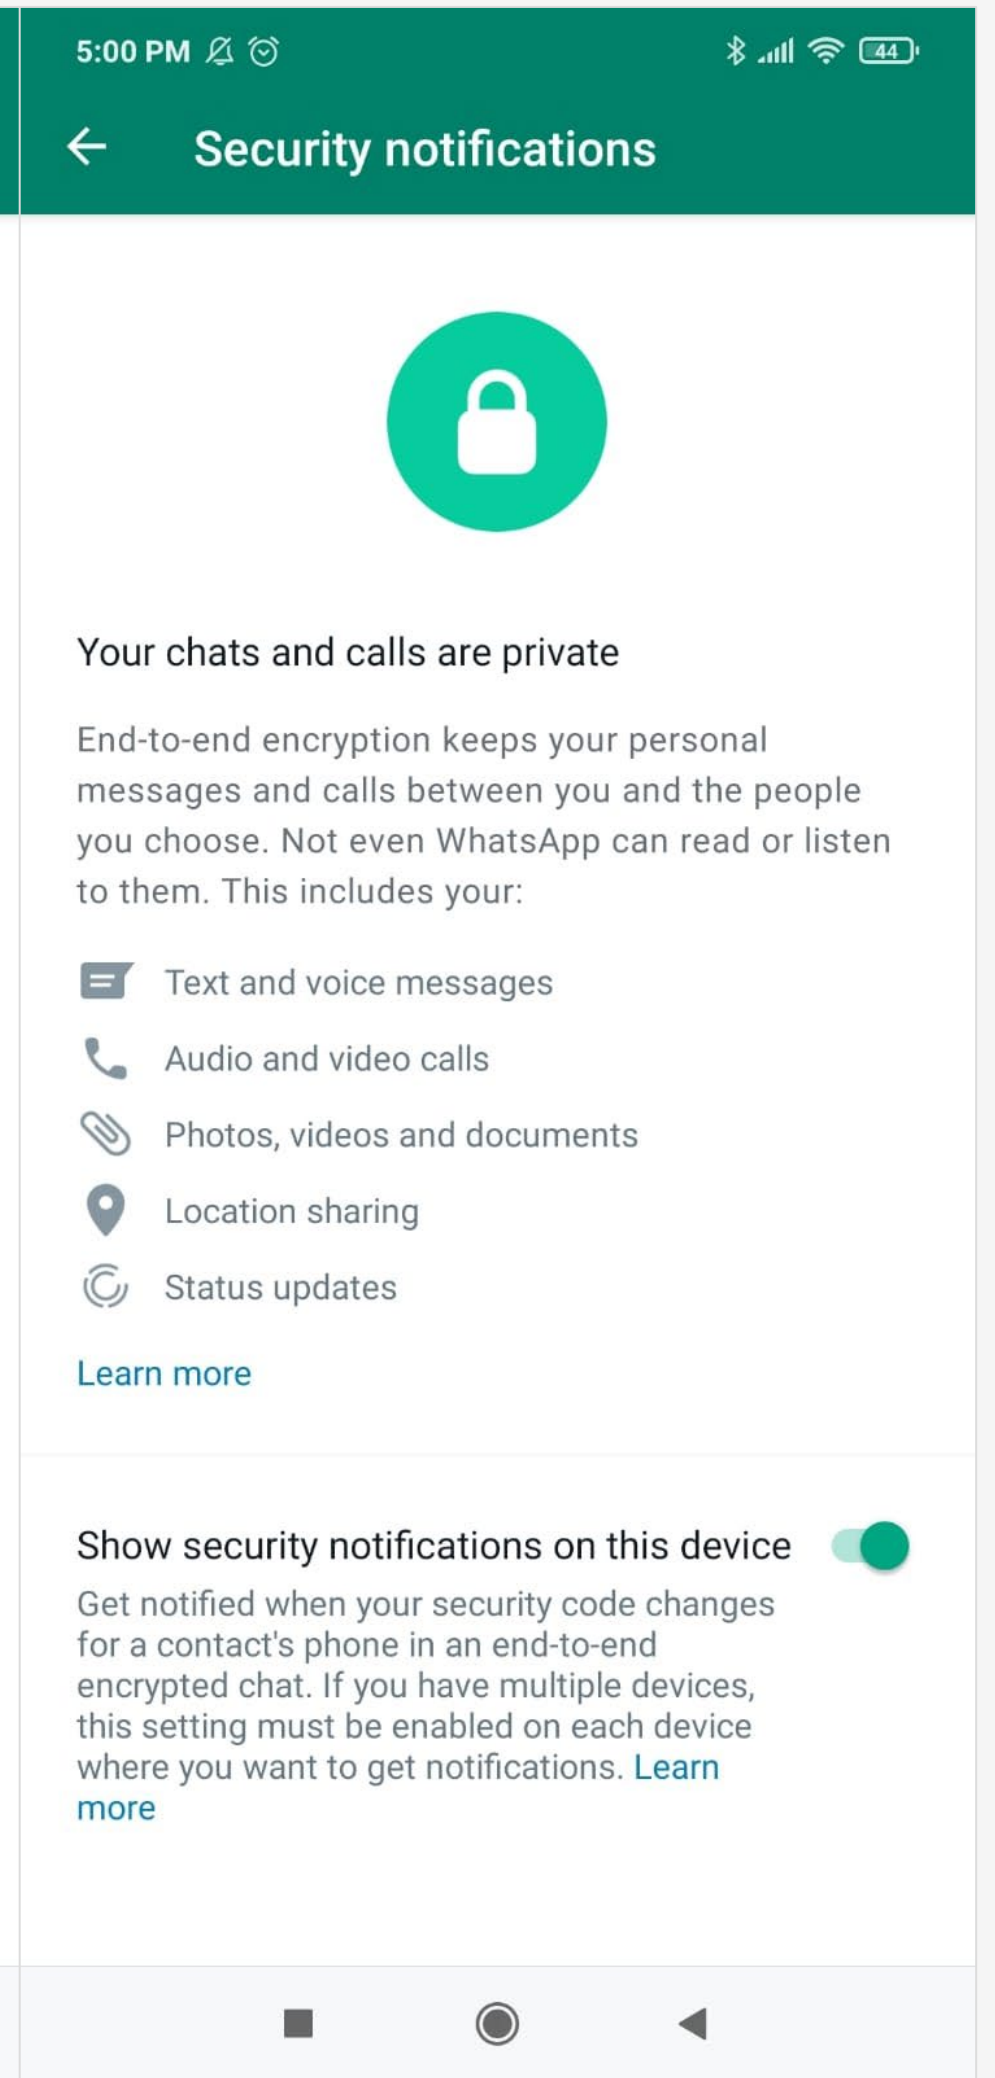

- Account
Security notifications, change number
- Privacy
Block contacts, disappearing messages
- Avatar
Create, edit, profile photo
- Chats
Theme, wallpapers, chat history
- Notifications
Message, group & call tones
- Storage and data
Network usage, auto-download
- App language
English (phone's language)
- Help
Help center, contact us, privacy policy
- Invite a friend

4:42 PM

← Account

- Security notifications
- Two-step verification
- Change number
- Request account info
- Delete my account

5:00 PM

← Security notifications

Your chats and calls are private

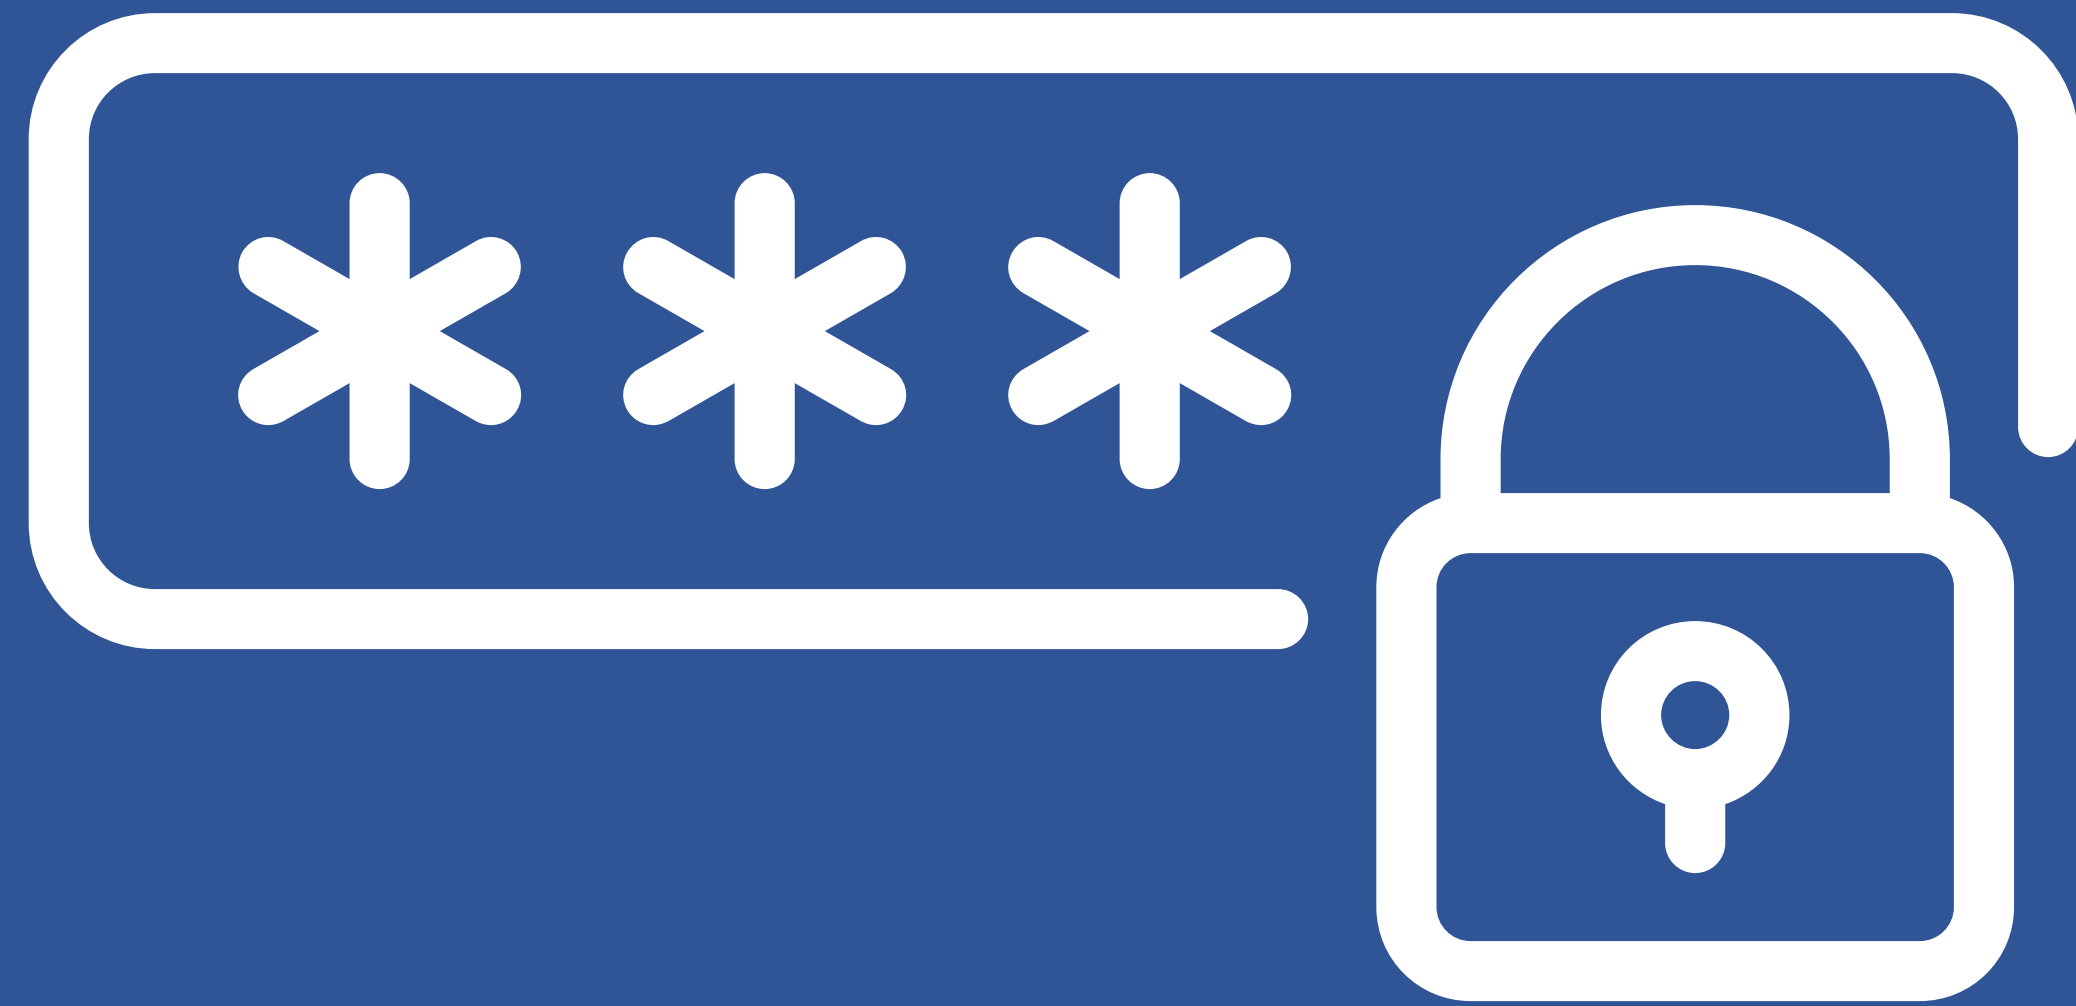

End-to-end encryption keeps your personal messages and calls between you and the people you choose. Not even WhatsApp can read or listen to them. This includes your:

- Text and voice messages
- Audio and video calls
- Photos, videos and documents
- Location sharing
- Status updates

Show security notifications on this device

Get notified when your security code changes for a contact's phone in an end-to-end encrypted chat. If you have multiple devices, this setting must be enabled on each device where you want to get notifications. [Learn more](#)

What about your password?

Is this safe?

**Two-factor authentication,
two-step authentication?**

Two-factor authentication

Something you know

Something you have

Two-factor authentication

Password Authentication via SMS

Option not recommended

Two-step authentication via
app on your mobile

Recommended option

Recommendations

Recommendations

Update

- Regularly
- Immediately from a compromised account notification
- Use complex sentences

Do not recycle

- Avoid using the same one on all your accounts
- Immediately from a compromised account notification
- Use complex sentences

Multifactor Authentication

- Avoid using authentication via SMS
- Some options:
[Google authenticator](#)
[Microsoft authenticator](#)

Implement changes...

- Try to use 2FA on Facebook, twitter, Instagram, gmail etc..

BE Aware!

Non-consensual distribution of images

Be aware: It is a practice that carries several risks

Protect your photos and videos

You have the right to request the removal of your photos and videos from internet platforms.

META: Take it Down platform.

What are we doing?

Launch Event

Addressing the Gender Gap in the **Cybersecurity Agenda** in the **Americas** and the **Caribbean Region**

2022-2026

Wednesday,
November
2nd

Bogota	09:00
Washington D.C	10:00
São Paulo	11:00
GMT	14:00

- The new initiative undertaken by the Cybersecurity Program with the support of Canada is an international benchmark.
- The project will promote synchronized activities to counter the root causes of gender inequality in the cybersecurity sector.
- Development of an inclusive and gender-sensitive regional cybersecurity culture that promotes the empowerment of women and the closing of the gender gap through cooperation with all stakeholders.

Next steps

- Support training of young women and girls in cybersecurity career options.

- Promoting greater awareness of online risks for girls: social media campaign and workshops

- Develop and disseminate materials on digital security with a gender perspective.
