11th - 13th April, 2024

San Ignacio Hotel, San Ignacio, Belize C.A.

Building Digital Trust

José Luis Solleiro

ICAT-UNAM

April 2024

Why to talk about trust?

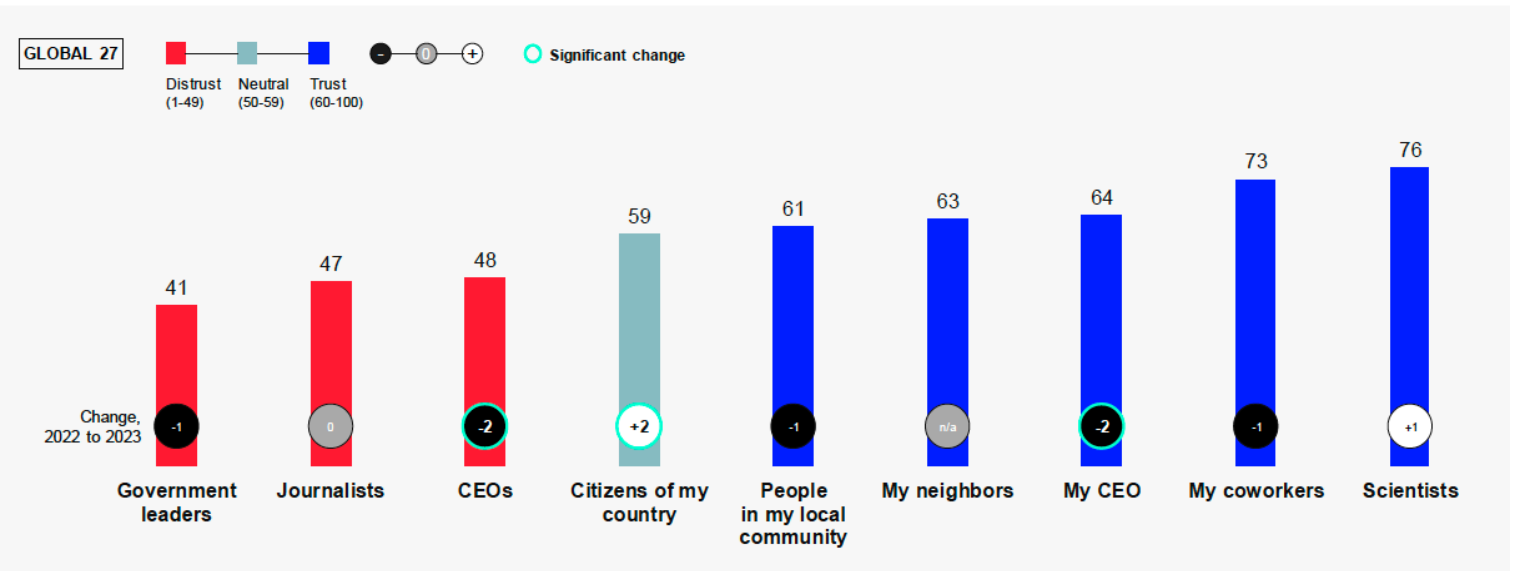

- Digital technologies, such as social networks, smartphones, block chains or big data, have become an indispensable part of our lives
- There is a widening trust gap between individual citizens and consumers, their governments and the businesses that create and deploy digital technologies
- How can you trust someone you'll never see?
- How can you trust an algorithm that is making thousands of decisions a second of which you aren't even aware?
- How can you trust a company that tracks your movement every day?
- Trust surveys have registered an alarming decrease in trust in science and technology as well as a host of other social institutions and links

The concept of digital trust

- Trust is founded on a belief in the likelihood that other agents would behave in a predictable manner
- In the era of the digital economy, contact between customers and sellers takes place increasingly via the Internet. Therefore, the concept of digital trust is increasingly used
- Digital trust is individuals' expectation that digital technologies and services –and the organizations providing them– will protect all stakeholders' interests and uphold societal expectations and values.

WEF's framework for digital trust

Determinants of digital trust

Transparency

Responsiveness
and justice

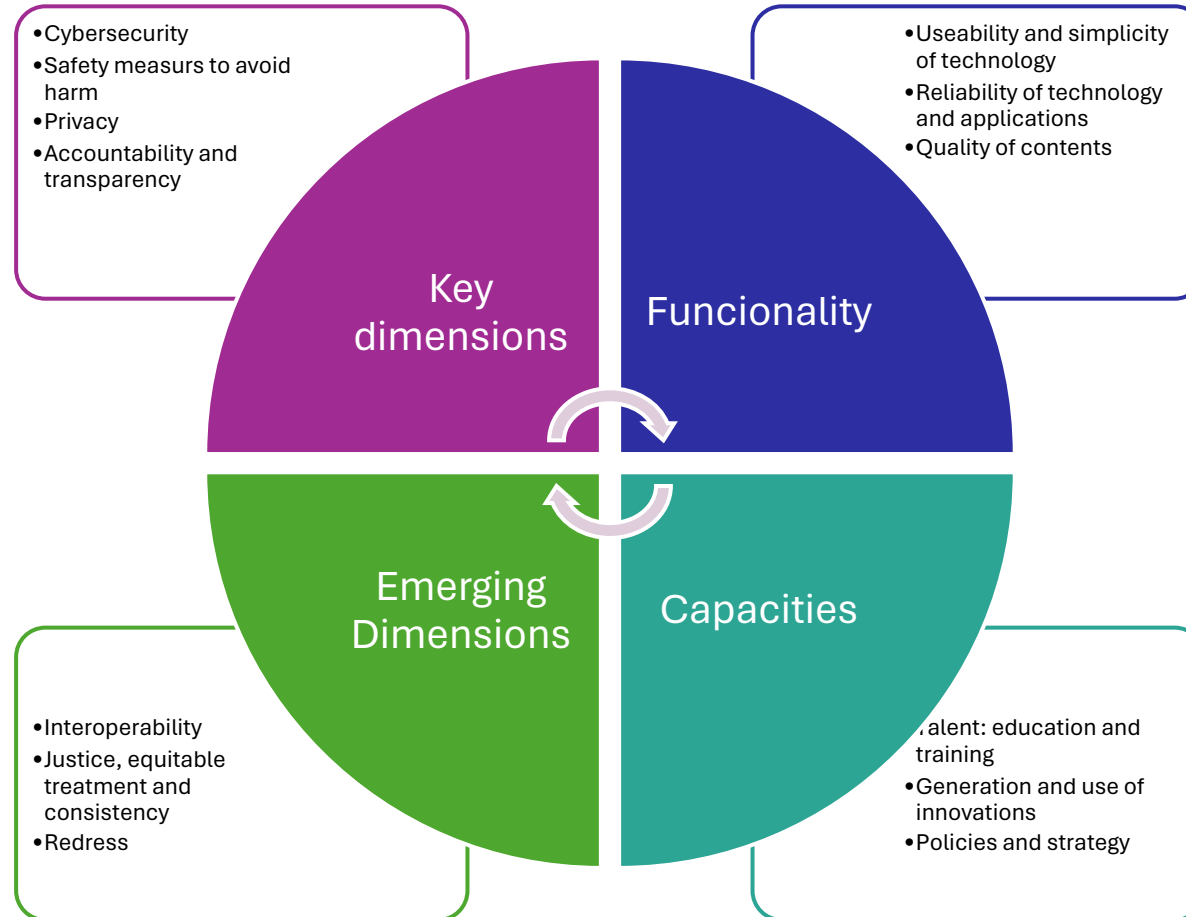

Respect and
equitable
treatment

Empathy,
collaboration and
effective
communication

Regulatory
framework

Use of
technologies to
improve safety

Instrumental factors for building trust

Relational factors for building digital trust

Interpersonal dimensions

- Shared values
- Strength of links
- Perceived similarity
- Repeated interactions
- Openness
- Benevolence through reciprocity

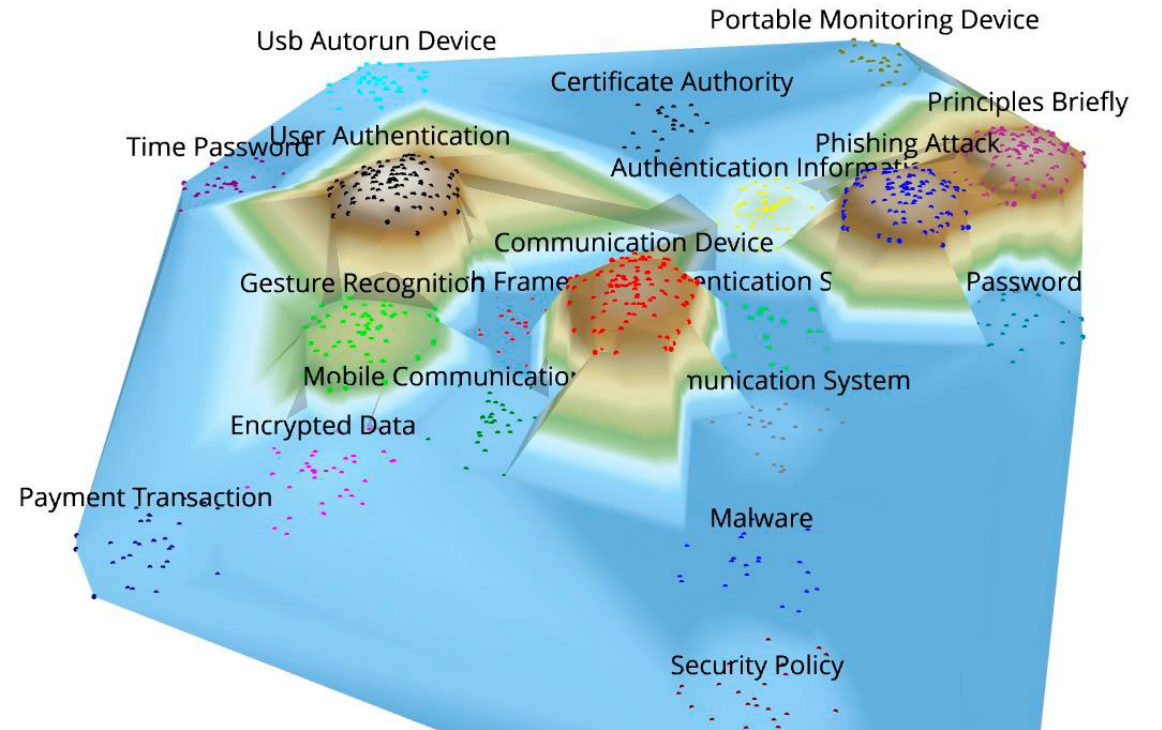

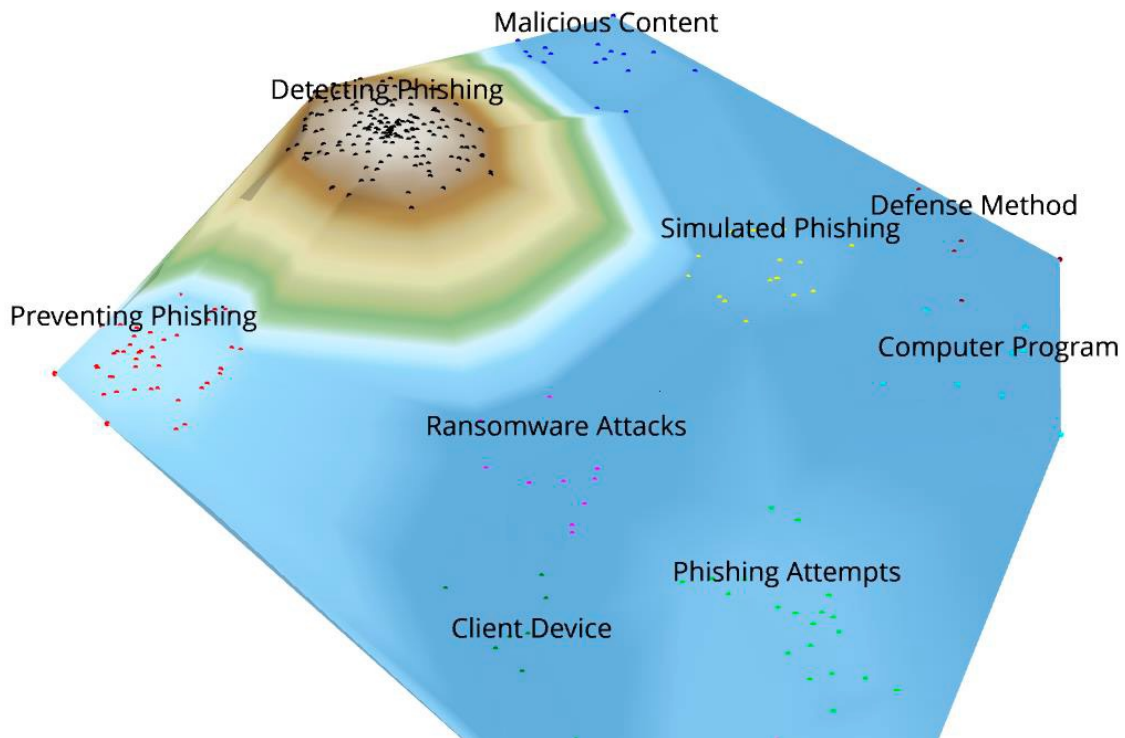

Individual differences

- Digital literacy
- Experience in using technology
- Propensity to trust
- Age
- Education
- Income level

Regulatory Framework

ISO 27000 Family ISO28000	NIST Cybersecurity CIS Controls COBIT 5	GSMA Knowledge Base NESAS SCAS
---------------------------------	--	--

Technologies and innovation

In summary

- Digital trust is the key to open a prosperous and inclusive digital future
- Building digital trust requires a collective effort
- It is a matter of strategy
- Transparency, data protection, shared responsibility, cybersecurity, combating fake information, and securing privacy
- Accountability and oversight

Thank you!
